

Concrete screw BSZ

Steel zinc plated

Range of loading: 0,48 kN–32,7 kN
Range of concrete quality: C20/25–C50/60

Description

Option 1 approved concrete screw BSZ cut a positive thread in the concrete when being screwed in and enable attachment to be made close to the edge through the expansion-free operating principle (=undercut). The approved adjustment enables subsequent alignment to compensate for unevenness. The concrete screw BSZ is also ideal for temporary fixings since it is fully removable. Installation with an impact screwdriver means that you do not need to use a torque wrench. It is quick, reliable and reduces assembly errors. The concrete screw BSZs are available with connection thread and with a range of different head shapes for a wide variety of applications.

Advantages

- European Technical Assessment for anchoring in cracked and uncracked concrete (Option 1) for concrete screws in sizes 6, 8, 10, 12 and 14
- With up to 3 embedment depths, it is versatile for high loads or low levels of drilling and installation effort
- European Technical Assessment for redundant non-structural systems in concrete and precast pre-stressed hollow core slabs for concrete screws in sizes 5 and 6
- Approved for use under seismic conditions of category C1²⁾ and C2²⁾
- By using the Filling Washer VS³⁾, the permissible loads under seismic action C1 and C2 can be further increased
- Approved for use under fire exposure (R30-R120)
- General design approval for temporary fastenings (BSZ-SU: Ø10-Ø14)
- Small drill hole diameter, small edge and axial gap

- Rapid push-through installation with an impact screwdriver without torque regulation
- No curing times, can be loaded immediately
- Adjustable to compensate for unevenness (Ø8- Ø14 mm)
- Can be fully removed
- Wide range of possible applications through numerous variants
- Visually appealing through different head shapes
- Without assessment, can also be used in compression-resistant natural stone, various solid bricks and green concrete

Applications

To anchor moderate to heavy loads in cracked and uncracked concrete: Railings and handrails, shelves, wooden beams, supports and braces, brackets, pipeline and cable routes, suspended ceilings, etc. Temporary fastening of construction site facilities, such as props, fall protection and scaffolding.

Highly versatile for up to three different embedment depths

- Embedment depth 1:**
- low level of drilling and installation effort
 - large clamping thickness
 - reduced loads

- Embedment depth 2:**
- medium level of drilling and installation effort
 - medium clamping thickness
 - moderate load

- Embedment depth 3:**
- higher level of drilling and installation effort
 - small clamping thickness
 - heavy loads

¹⁾Only for use in solid concrete

²⁾For head designs, diameters and screw-in depths, see product tables and ETA-16/0204

³⁾Filling washers see page 95

Concrete screw BSZ-SU

- ➔ Hex head with pressed disc
- ➔ Steel, zinc plated
- ➔ Through smaller drive with pressed disc also suitable for areas, where access is difficult, and elongated holes (e.g. mounting rails)

Characteristic edge distance	$c_{cr, fi}$	[mm]	-	54	88	

Installation

Extract from Permissible Service Conditions of European Technical Assessment ETA-16/0439 for use in precast pre-stressed hollow core slabs for redundant non-structural systems

Approved loads according to EN 1992-4 for single anchors without the influence of spacing and edge distances. The total safety factor (γ_M und γ_p) is included. The admissible loads per fixing point can be taken from the relevant national regulations of the EOTA member states and may be lower than the approved load of the anchor.

Loads and performance data	Concrete screw size	BSZ 6		
Nominal embedment depth	h_{nom} [mm]	≥ 35		
Precast pre-stressed hollow core slabs C30/37 to C50/60				
Flange thickness	$d_b \geq$ [mm]	25	30	35
	$F_{appr.}$ [kN]	0,48	0,95	1,43
Spacing and edge distance				
Minimum spacing	s_{min} [mm]	100		
Minimum edge distance	c_{min} [mm]	100		
Installation parameters				
Drill hole diameter	d_o [mm]	6		
Diameter of clearance hole in the fixture	d_f [mm]	8		
Depth of drill hole	$h_{1 \geq}$ [mm]	40		
Installation torque	$T_{inst \leq}$ [Nm]	10		

Installation in precast pre-stressed hollow core slabs

$w / e \leq 4,2$

- w Core width
- e Web thickness

- Core distance $l_c \geq 100$ mm
- Distance between prestressing steel $l_p \geq 100$ mm
- Distance between anchor position and pre-stressing steel $a_p \geq 50$ mm

Installation parameters for anchors in precast pre-stressed hollow core slabs

- c_1, c_2 Edge distance
- s_1, s_2 Anchor spacing
- a_1, a_2 Distance between the anchor groups

- Minimum edge distance $c_{min} \geq 100$ mm
- Minimum spacing $s_{min} \geq 100$ mm
- Minimum distance between the anchor groups $a_{min} \geq 100$ mm

Installation
