DECLARAȚIA DE PERFORMANȚĂ

DoP Nr.: **MKT-711** - ro

✧ **Cod unic de identificare al produsului-tip:** **șurub beton BSZ**

✧ **Utilizare (utilizări) preconizată (preconizate):** Ancora mecanică pentru ancorare în beton, a se vedea anexa / Annex B

✧ **Fabricant:** MKT Metall-Kunststoff-Technik GmbH & Co.KG
Auf dem Immel 2
67685 Weilerbach

✧ **Sistem sau sisteme de evaluare și verificare a constanței performanței:** 1

✧ **Documentul de evaluare european:** **EAD 330232-00-0601**
Evaluarea tehnică europeană: **ETA-16/0204, 19.09.2019**
Organismul de evaluare tehnică: DIBt, Berlin
Organism (organisme) notificat(e): NB 1343 – MPA, Darmstadt

✧ **Performanța (performanțe) declarată (declarate):**

Caracteristici esențiale	Performanță
Rezistență mecanică și stabilitate (BWR 1)	
Rezistențe caracteristice sub sarcină la tracțiune (efecte statice și cvasistatice)	Anexa / Annex C1
Rezistențe caracteristice sub stres transversal (efecte statice și cvasistatice)	Anexa / Annex C1
Rezistență caracteristică și deplasări pentru categoria de performanță seismică C1 + C2	Anexa / Annex C2, C3, C4, C7
Schimbări (efecte statice și cvasistatice)	Anexa / Annex C6
Durabilitate	Anexa / Annex B1
Securitatea la incendiu (BWR 2)	
Comportamentul la foc	Clasa A1
Rezistență la foc	Anexa / Annex C5

Performanța produsului de mai sus este performanța / performanța declarată. Producătorul de mai sus este singurul responsabil de întocmirea declarației de performanță în conformitate cu Regulamentul (EU) nr. 305/2011.

Semnată pentru și în numele fabricantului de către:

Stefan Weustenhagen
(Director general)
Weilerbach, 19.09.2019

p.p.
Dipl.-Ing. Detlef Bigalke
(Sef de dezvoltare a produselor)

Originalul acestei declarații de performanță a fost scris în limba germană. În cazul abaterilor în traducere, versiunea germană este validă.

Specifications of Intended use

Concrete screw BSZ		BSZ 6		BSZ 8			BSZ 10			BSZ 12			BSZ 14		
Nominal anchorage depth h_{nom} [mm]		40	55	45	55	65	55	75	85	65	85	100	75	100	115

	Seismic action C1	-		-		✓	-		✓	-		✓	-		✓
	Seismic action C2 (concrete screw BSZ, zinc plated)	-		-		✓	-		✓	-		✓	-		✓
Base material	Cracked or uncracked concrete	✓		✓			✓			✓			✓		
	Reinforced or unreinforced concrete (without fibres) acc. to EN 206:2013	✓		✓			✓			✓			✓		
	Strength classes according to EN 206:2013: C20/25 to C50/60	✓		✓			✓			✓			✓		

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions
  (zinc plated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure including industrial and marine environment or exposure to permanently damp internal condition, if no particular aggressive conditions exist
  (stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (high corrosion resistant steel)

  Note: Particular aggressive conditions are e.g. permanent, alternation immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Design method of anchorages under static or quasi-static load according to EN 1992-4:2018 and EOTA Technical Report TR 055.
  The design method of anchorages under shear load according to EN 1992-4:2018, section 6.2.2. also applies for the specified diameter d_f of the clearance hole in the fixture in Annex B2, Table B1

Installation:

- Making of drill hole by hammer drilling (all sizes) or vacuum drill bit (BSZ 8 – BSZ 14).
  When using a vacuum drill bit no drill hole cleaning is required.
- Anchor installation carried out by appropriately qualified personal and under the responsibility of the person responsible for technical matters on site.
- After installation further turning of the anchor is not possible. The head of the anchor is supported on the fixture and is not damaged.
- The borehole may be filled with injection mortar with a compressive strength of 40 N/mm² (e.g. MKT Injection mortar VMZ, VMH or VMU plus).
- Adjustment according to Annex B4: for concrete bolts BSZ 8 to BSZ 14, all anchorage depths for static or quasi-static loads.

Table B1: Installation parameters

Anchor size			BSZ 6		BSZ 8			BSZ 10			BSZ 12			BSZ 14		
Nominal embedment depth	h_{nom}	[mm]	40	55	45	55	65	55	75	85	65	85	100	75	100	115
Nominal drill bit diameter	d_0	[mm]	6		8			10			12			14		
Cutting diameter of drill bit	$d_{cut} \leq$	[mm]	6,40		8,45			10,45			12,50			14,50		
Effective anchorage depth	h_{ef}	[mm]	31	44	35	43	52	43	60	68	50	67	80	58	79	92
Depth of drill hole	$h_1 \geq$	[mm]	45	60	55	65	75	65	85	95	75	95	110	85	110	125
Diameter of clearance hole in the fixture	$d_f \leq$	[mm]	8		12			14			16			18		
Max. installation torque for screws with metric connection thread	$T_{inst} \leq$	[Nm]	10		20			40			60			80		
Tangential impact screw driver [1]	$T_{imp,max}$	[Nm]	160		300			400			650			650		

[1] Installation with tangential impact screw driver, with maximum power output $T_{imp,max}$ acc. to manufacturers instructions is possible

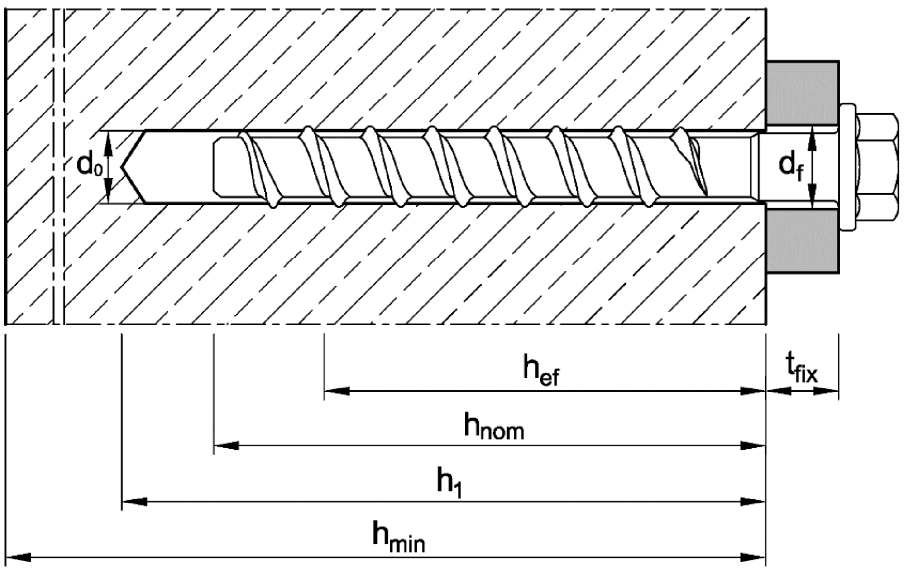

Table B2: Minimum thickness of member, minimum edge distance and minimum spacing

Anchor size			BSZ 6		BSZ 8			BSZ 10			BSZ 12			BSZ 14		
Nominal embedment depth	h_{nom}	[mm]	40	55	45	55	65	55	75	85	65	85	100	75	100	115
Minimum thickness of member	h_{min}	[mm]	100		100		120	100	130		120	130	150	130	150	170
Minimum spacing	s_{min}	[mm]	40		40	50		50			50		70	50	70	
Minimum edge distance	c_{min}	[mm]	40		40	50		50			50		70	50	70	

Concrete Screw BSZ

Intended use
Installation parameters / Minimum thickness of concrete member, minimum spacing and edge distance

Annex B2

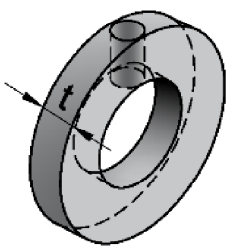
Installation instructions

Drill hole preparation and cleaning		
1		Drill hole perpendicular to concrete surface. Using a suction drill, continue with step 3.
2		Blow out dust or alternatively vacuum clean down to the bottom of the hole.
Installation concrete screw		
3		Screw in, e.g. with tangential impact screw driver or torque wrench.
4		After installation, the head of the anchor is supported on the fixture and must be undamaged.

Installation instructions - filling of annular gap

Drill hole preparation and cleaning		
1		Drill hole perpendicular to concrete surface. Using a suction drill, continue with step 3.
2		Blow out dust or alternatively vacuum clean down to the bottom of the hole.
Installation concrete screw with filling washer		
3		Fit the filling washer to the concrete screw. The thickness of the filling washer must be taken into account with t_{fix}.
4		Screw in, e.g. with tangential impact screw driver or torque wrench.
6		Fill the annular gap between concrete screw and fixture with mortar (compressive strength ≥ 40 N/mm², e.g. Injection mortar VMH, VMZ or VMU plus). Use enclosed reducing adapter. Observe the processing information of the mortar! The annular gap is completely filled, when excess mortar seeps out.
For seismic loading, the application <u>with</u> and <u>without</u> filling of annular gap is permitted (Annex C3-C4).		

Filling washer and reducing adapter for filling the annular gap between concrete screw and fixture



thickness of filling washer
t = 5 mm

Concrete Screw BSZ

Intended use
Installation instructions with filling of annular gap

Annex B4

Installation instructions - Adjustment

Drill hole preparation and cleaning see Annex B3, Picture 1 and 2

1. Adjustment

3		Screw may be untightened maximum 10mm.
4		After adjustment, screw in the concrete screw with with tangential impact screw driver or torque wrench.
5		After installation, the head of the anchor is supported on the fixture must be undamaged.

2. Adjustment

6		Screw may be untightened maximum 10mm.
7		After adjustment, screw in the concrete screw with with tangential impact screw driver or torque wrench.
8		After installation, the head of the anchor is supported on the fixture and must be undamaged.

- adjustment is only permitted for fixings with concrete screws size BSZ 8 - BSZ 14 under static or quasi-static load.
- the fastener may be adjusted max. 2x. The fastener must not be screwed back by more than 10mm in each case. The relining carried out during adjustment must not exceed 10 mm in total.
  Nominal embedment depth h_{nom} must still be maintained after the adjustment.

Concrete Screw BSZ

Intended use
Installation instructions - Adjustment
