- Cracked or uncracked concrete
- Reinforced or unreinforced normal weight concrete according to EN 206: 2013 + A1:2016
- Strength classes C20/25 to C50/60 according to EN 206: 2013 + A1:2016

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions: **BZ3, BZ3 A4, BZ3 HCR**
- For all other conditions according to EN 1993-1-4:2015-10 corresponding to corrosion resistance classes:
 - according to Annex A, Table A.3: CRC I - III **BZ3 A4, BZ3 HCR**
 - according to Annex A, Table A.3: CRC IV, V **BZ3 HCR**

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement or to supports, etc.)
- Design method EN 1992-4:2018 and Technical Report TR 055

Installation:

- Hole drilling by hammer drill bit or vacuum drill bit
- Use of the fastener only as supplied by the manufacturer without exchanging the components of the fastener (exception: when using the cap nut HM)
- Optionally, the annular gap between fixture and stud of the BZ3 can be filled to reduce the hole clearance. For this purpose, the filling washer (annex A3) must be used in addition to the supplied washer. For filling use high-strength mortar with compressive strength $\geq 40\text{N/mm}^2$.
