## Installation instructions

1		<p>Drill hole perpendicular to concrete surface. If using a vacuum drill bit, proceed with step 3.</p>
2		<p>Blow out dust. Alternatively vacuum clean down to the bottom of the hole.</p>
3		<p>Drive in fastener with filling washer until effective anchorage depth is reached.</p>
4		<p>Apply installation torque <math>T_{inst}</math> according to Table B1 by using torque wrench.</p>
5		<p>Screw on locknut until hand tight then tighten <math>\frac{1}{4}</math> to <math>\frac{1}{2}</math> turn.</p>
6		<p>Fill the annular gap between anchor and fixture with mortar (compressive strength <math>\geq 40 \text{ N/mm}^2</math>, e.g. MKT Injection System VMH, VMZ or VMU plus). Use enclosed reducing adapter. Observe the processing information of the mortar! The annular gap is completely filled, when excess mortar seeps out.</p>
