

## SUORITUSTASOILMOITUS

DoP Nro: **MKT-2.1-301\_fi**

- ✧ **Tuotetyypin yksilöllinen tunniste:** **Ruiskutusjärjestelmä VMU plus betoniin**
- ✧ **Aiottu käyttötarkoitus (aiotut käyttötarkoitukset):** Sidottu ankkuri betoniin kiinnittämistä varten, katso liite / Annex B
- ✧ **Valmistaja:** MKT Metall-Kunststoff-Technik GmbH & Co.KG  
Auf dem Immel 2  
67685 Weilerbach
- ✧ **Suoritustason pysyvyyden arvioinnissa ja varmentamisessa käytetty järjestelmä/käytetyt järjestelmät:** 1
- ✧ **Eurooppalainen arviointiasiakirja:** **EAD 330499-01-0601**  
Eurooppalainen tekninen arviointi: **ETA-11/0415, 01.06.2021**  
Teknisestä arvioinnista vastaava laitos: DIBt, Berlin  
Ilmoitettu laitos/ilmoitetut laitokset: NB 2873 – Technische Universität Darmstadt

✧ **Ilmoitettu suoritustaso/ilmoitetut suoritustasot:**

Olellaiset ominaisuudet	Suoritustaso
<b>Mekaaninen lujuus ja vakaus (BWR 1)</b>	
Ominaisresistanssit vetolujuudessa (staattiset ja lähes staattiset vaikutukset)	Liite / Annex B2, C1, C3, C4, C7, C9
Ominaisresistanssit poikittaisessa rasituksessa (staattiset ja lähes staattiset vaikutukset)	Liite / Annex C2, C5, C8, C10
Vuorossa (staattiset ja lähes staattiset vaikutukset)	Liite / Annex C12, C13
Ominaisvastus ja siirtymät seismiselle suorituskyluokalle C1	Liite / Annex C6, C11
Ominaisvastus ja siirtymät seismiselle suorituskyluokalle C2	Suorituskykyä ei arvioitu
<b>Hygienia, terveys ja ympäristö (BWR 3)</b>	
Vaarallisten aineiden pitoisuus, päästöt ja / tai päästöt	Suorituskykyä ei arvioitu

Edellä yksilöidyn tuotteen suoritustaso on ilmoitettujen suoritustasojen joukon mukainen. Tämä suoritustasoilmoitus on asetuksen (EU) N:o 305/2011 mukaisesti annettu edellä ilmoitetun valmistajan yksinomaisella vastuulla.

Valmistajan puolesta allekirjoittanut:

**Stefan Weustenhagen**

(Toimitusjohtaja)

**Weilerbach, 01.06.2021**

p.p.

**Dipl.-Ing. Detlef Bigalke**

(Tuotekehityksen johtaja)

Tämän suoritusilmoituksen alkuperäinen teksti on kirjoitettu saksaksi. Jos käännökset poikkeavat toisistaan, saksankielinen versio on pätevä.

## Specification of intended use

Injection System VMU plus	Threaded rod	Internally threaded anchor rod	Rebar
Static and quasi-static action	M8 - M30	IG-M6 - IG-M20 (zinc plated, A4, HCR)	Ø8 - Ø32
Seismic action, performance category C1	M8 - M30	-	Ø8 - Ø32
Base materials	compacted, reinforced or unreinforced normal weight concrete (without fibers), acc. to EN 206:2013 + A1:2016 strength classes C20/25 to C50/60 acc. to EN 206-1:2013+A1:2016 cracked and uncracked concrete		
Temperature Range I -40°C to +40°C	max long term temperature +24 °C and max short term temperature +40°C		
Temperature Range II -40°C to +80°C	max long term temperature +50 °C and max short term temperature +80°C		
Temperature Range III -40°C to 120°C	max long term temperature +72 °C and max short term temperature +120°C		

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (all materials).
- For all other conditions:  
Intended use of Material according to Annx A4, Table A1 corresponding corrosion resistance classes CRC according to EN 1993-1-4:2006 +A1:2015

### Design:

- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work
- Anchorages are designed in accordance with EN 1992-4:2018 and Technical Report TR 055, Edition February 2018

### Installation:

- Dry or wet concrete: M8 to M30, IG-M6 to IG-M20, Rebar Ø8 to Ø32
- Waterfilled holes (not sea water): M8 to M16, IG-M6 to IG-M10, Rebar Ø8 to Ø16
- Hole drilling by hammer or compressed air drill mode or vacuum drill mode
- Installation direction D3: downwards, horizontally and upwards (overhead) installation
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- The injection mortar is assessed for installation at minimum concrete temperature of -10°C resp. -20°C, where subsequently the temperature in the concrete does not rise at a rapid rate, i.e. from the minimum installation temperature to 24°C within a 12-hour period.
- Internally threaded anchor rod: screws and threaded rods (incl. nut and washer) must at least correspond to the material and strength class of the internally threaded anchor rod used

## Injection system VMU plus for concrete

Intended Use  
Specifications

**Annex B1**

**Table B1: Installation parameters for threaded rod**

Threaded rod			M8	M10	M12	M16	M20	M24	M27	M30

**Blow-out pump (volume 750ml)**  
 Drill bit diameter ( $d_0$ ): 10 mm to 20 mm  
 Anchorage depth ( $h_{ef}$ ):  $\leq 10 d_{nom}$   
 for uncracked concrete

**Recommended compressed air tool (min 6 bar)**  
 All applications

**Retaining washer for overhead or horizontal installation**  
 Drill bit diameter ( $d_0$ ):  
 18 mm to 40 mm

**Steel brush**  
 Drill bit diameter ( $d_0$ ): all diameters

**Injection system VMU plus for concrete**

**Intended Use**  
 Cleaning and setting tools

**Annex B3**

# Installation instructions

## Drilling of the hole

1

Drill the hole by applying the drilling method acc. to Annex B1, the drill bit diameter (Table B4) and the selected drill hole depth.  
In case of aborted hole, the drill hole shall be filled with mortar

## Cleaning, all drilling methods

**Attention! Standing water in the drill hole must be removed before cleaning!**

### Cleaning with compressed air

(all diameters, cracked and uncracked concrete)

2a

Starting from the bottom or back of the drill hole, blow out the hole with compressed air (min. 6 bar) **four** times, until return air stream is free of noticeable dust.  
If the drill hole ground is not reached, an extension must be used.

2b

Brush the hole with an appropriate sized wire brush  $> d_{b,min}$  (Table B4) **four** times.  
If the drill hole ground is not reached, a brush extension shall be used.

2c

Finally blow the hole clean again with compressed air (min. 6 bar) **four** times, until the outgoing airstream is free of dust. If the drill hole ground is not reached an extension shall be used.

2

### Manual cleaning

uncracked concrete: Drill hole diameter  $d_0 \leq 20\text{mm}$  and effective anchorage depth  $h_{ef} \leq 10 d_{nom}$

cracked concrete: Drill hole diameter:  $14\text{mm} \leq d_0 \leq 20\text{mm}$  and effective anchorage depth  $h_{ef} \leq 10 d_{nom}$

2a

Starting from the bottom or back of the drill hole, blow the hole clean with the blow-out pump **four** times until return air stream is free of noticeable dust.

2b

Brush the hole **four** times with an appropriate sized wire brush  $> d_{b,min}$  (Table B4).  
If the drill hole ground is not reached, a brush extension shall be used.

2c

Finally blow the hole clean again with the blow-out pump **four** times until return air stream is free of noticeable dust.

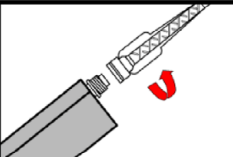

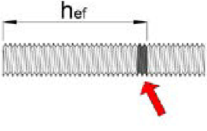

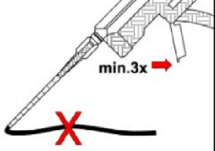

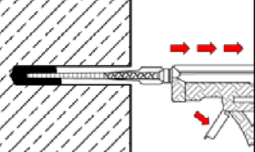

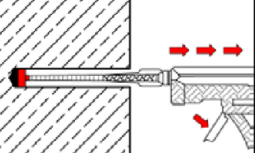

After cleaning, the drill hole has to be protected against re-contamination in an appropriate way, until dispensing the mortar in the drill hole. If necessary, the cleaning has to be repeated directly before dispensing the mortar. In-flowing water must not contaminate the drill hole again.

## Injection system VMU plus for concrete

Intended Use  
Installation instructions

Annex B4

## Installation instructions (continuation)

Injection		
3		Attach a supplied static-mixing nozzle to the cartridge and load the cartridge into the correct dispensing tool. For every working interruption longer than the recommended working time (Table B5 or Table B6) as well as for new cartridges, a new static-mixer shall be used.
4		Before injecting the mortar, mark the required anchorage depth on the fastening element.
5		Prior to dispensing into the drill hole, squeeze out separately a minimum of three full strokes and discard non-uniformly mixed adhesive components until the mortar shows a consistent grey colour. For tubular film cartridges dismiss a minimum of six full strokes.
6a		Starting from the bottom or back of the cleaned drill hole fill the hole up to approximately two-thirds with adhesive. Slowly withdraw the static mixing nozzle as the hole fills to avoid air pockets. For embedment larger than 190mm an extension nozzle shall be used. Observe the gel-/ working times given in Table B5 or Table B6.
6b		Retaining washer and mixer nozzle extensions shall be used according to Annex B3 for the following applications: <ul style="list-style-type: none"> <li>• Horizontal installation (horizontal direction) and ground installation (vertical downwards direction): Drill bit-<math>\varnothing</math> <math>d_0 \geq 18</math> mm and embedment depth <math>h_{ef} &gt; 250</math>mm</li> <li>• Overhead installation: Drill bit-<math>\varnothing</math> <math>d_0 \geq 18</math> mm</li> </ul>

Injection system VMU plus for concrete

**Intended Use**  
Installation instructions (continuation)

**Annex B5**

## Installation instructions (continuation)

### Setting the fastening element

7		<p>Push fastening element into the hole while turning slightly to ensure proper distribution of the adhesive until the embedment depth is reached. The anchor shall be free of dirt, grease, oil or other foreign material.</p>
8		<p>Make sure that the fastening element is fully seated up to the full embedment depth and that excess mortar is visible at the top of the hole. If these requirements are not maintained, the application has to be renewed before the end of the working time. For overhead installation, the anchor should be fixed (e.g. by wedges).</p>
9		<p>Allow the adhesive to cure to the specified time prior to applying any load or torque. Do not move or load the anchor until it is fully cured (Table B5 or Table B6).</p>
10		<p>Remove excess mortar.</p>
11		<p>The fixture can be mounted after curing time. Apply installation torque <math>\leq T_{inst}</math> according to Table B1 or B2.</p>
12		<p>Optionally, for pre-setting installation, the annular gap between anchor rod and attachment can be filled with mortar. Therefore replace the regular washer by washer with drill and plug on reducing adapter on static mixer. Annular gap is completely filled, when excess mortar seeps out.</p>
